ABSTRACT

SUR  
A1

5      ~~An apparatus for preparing dialysis liquid which~~  
includes a container holder 112 for holding a container  
102 in the inverted state, the container having a tubular  
body portion which defines an internal volume for  
accommodating powder preparation for preparing dialysis  
liquid, a bottom wall defined at an end of the tubular  
body portion, and a sealing member for closing an outlet  
10      opening defined at the end of the tubular body portion  
opposite to the bottom wall, a cutter 118, movable toward  
and away from the sealing member, for cutting the sealing  
member, a concentrated liquid tank 114a provided under  
the container holder 112, a mesh member 116 ,  
15      horizontally disposed above the tank, for receiving the  
powder preparation which has fallen from the container  
102, a nozzle 120 for applying water to the powder  
preparation, for preparing dialysis liquid, which has  
fallen on the mesh member from the container after the  
20      sealing member is cut by the cutter 118. The water is  
applied to the powder preparation for preparing dialysis  
liquid dropped on the mesh member to produce a  
concentrated liquid for the dialysis liquid, which is  
received in the concentrated liquid tank 114a, and the  
25      concentrated liquid is diluted with a diluting water as  
it is supplied to the dialyzer 160.
